         ***
        *****
      **     **
     **       **
     ***********
     *************
    **              **
    **                **
</pre>
<a href="fail.php">Click here to check the error setting</a>
<br>
<a href="check.php">Click here to cause a traceback</a>
```

Fail –
```php
<?php
echo("<p>What we want to see below is a 'Fatal Error'.</p>\n");
// Do not fix the mistake in the code below – the goal is to
// trigger an error to verify that we see errors in the browser.
failure_is_expected();
?>
```

Check –
```php
<?php
echo "<pre>\n";
echo 'display_errors = ' . ini_get('display_errors') . "\n";
if ( ini_get('display_errors') == 1 ) {
    echo("It is all good...\n");
    echo "</pre>\n";
    return;
}
echo("YOU ARE IN VERY BAD SHAPE!!!!!!\n");
echo("You need to edit this file:\n\n");
echo(php_ini_loaded_file()."\n\n");
echo("And set\n\n");
echo("display_errors = On\n\n");
echo("Until you do this, you will be very very unhappy doing PHP
development\n");
echo("in this PHP environment.\n");
echo "</pre>\n";
?>
```
